

Lesson 5 Maths Investigation - Cube Nets

Which of these nets folds up to make a cube?

To find out, copy the nets onto squared paper. Cut them out and fold them along the lines. When you have found a net that folds up into a cube, colour it in on the table.

Can you find any other nets that fold up into a cube shape?

Try out your ideas on the attached squared paper and then draw your successful nets onto another piece of paper?
